✉: ridswnt10@gmail.com ☎: +1 (206) 476 7439 in: [ridswnt10](https://github.com/ridswnt10) 🌐: ridswnt10.github.io 📍: San Francisco, CA

TECHNICAL SKILLS

Core Competencies: Statistical Modeling, Machine Learning, Time Series Forecasting, Causal Inference, ETL, Natural Language Processing, Database Systems, Distributed Systems, Data Visualization, Data Structures & Algorithms, Convex Optimization, LLM Serving Systems

Programming Languages: Python, R, PySpark, SQL, C++, Html, MATLAB, Java

Frameworks : PyTorch, TensorFlow, NumPy, Pandas, Scikit-learn, Matplotlib, Gurobi, OpenAI APIs, REST APIs, LangChain

Tools & Platforms: AWS, Databricks, Docker, Git, Airflow, Snowflake, Tableau, Kubernetes, MLflow, FastAPI, Kafka, CI/CD, Retool, Mode, MS Excel

EXPERIENCE

DoorDash

San Francisco, CA

Machine Learning Engineer

April 2026 - Present

- Contributing to an in-progress Credit & Refund (CnR) optimization engine using a **second-order cone programming (SOCP)** solver and consumer segmentation to determine fair, budget-constrained refunds while maximizing Gross Order Value (GOV); now running in live experimentation, with team-validated projections of **\$30M in annual savings**.
- Built a **RAG-based agentic diagnosis and monitoring system** over experiment, lifecycle event, and fraud event data to streamline root-cause investigation for CnR and fraud cases; integrated directly into Slack for non-technical stakeholders, adopted daily by **30+ analysts**, reducing aggregate manual investigation effort by **4-5 hours/week** across the team.

Faire

San Francisco, CA

Data Science Intern

June 2025 - September 2025

- Designed and deployed an AI agent fraud detection service with **GPT-powered multi-agent workflows** on AWS, processing 1,000+ applications/batch at **95%+ accuracy**, cutting review time from **30 minutes to 5 seconds**.
- Owned end-to-end lifecycle of a retailer sales estimation service using **deep research**, and transaction data (**±15% error for 80% of retailers**). Designed, deployed, and operated the system with a calibration layer for bias mitigation and monthly auto-retraining via **Airflow + AWS Batch**, directly impacting credit decisions for thousands of retailers.

CRED

Bengaluru, India

Data Scientist II

September 2022 - August 2024

- Owned design and deployment of a **dynamic pricing and allocation framework** to optimize interest rates across user segments, boosting portfolio conversion by **17%** and driving **\$12M** in incremental monthly disburseals; built with **CatBoost (AUC 0.83)** and **constraint-based optimization (Gurobi)**.
- Developed a **Bayesian time-series forecasting system (Orbit)** to predict credit disbursement demand and default risk for a **\$200M portfolio**, achieving **94% forecast accuracy** and reducing default risk by **6%**; automated retraining, saving **20+ hours monthly**.
- Developed a contrastive learning framework using a **Transformer-based sequence encoder (SASRec + SimCLR-style loss)** to cluster high-LTV vs low-engagement users, achieving **92% precision** and boosting profitability by **7%**.
- Deployed ML models as **real-time microservices** using **AWS + Docker + Kubernetes**, reducing scoring latency from **250ms to 50ms** and scaling to **500K+ daily requests**.

Data Scientist

June 2021 - September 2022

- Built a personalized homepage recommendation engine with **gradient boosting** and user segmentation, increasing **loan application clicks by 30%**.
- Increased approval rates by 5%** with a liability validation model (**random forest, AUC 0.84 + linear optimization**).
- Built a **real-time monitoring platform** with drift detection, residual analysis, and Slack/email alerts, integrated with the **feature store**. Onboarded **15+ production models**, cutting incident response time by **80%**.
- Improved offer conversion rate by 15%** by designing a loan uptake **propensity model** using xgboost(0.78 AUC)

EDUCATION

University of Washington, Seattle, WA

M.S. Data Science

Sept 2024 - Mar 2026

Birla Institute of Technology and Science Pilani, India

B.E. Electronics and Communication

Aug 2017 - May 2021

PUBLICATIONS AND PROJECTS

Novel EEG Features for Consumer Emotion Prediction using Correlation-Based Subset Selection

- Presented at AMC IMX 2022 Conference

MICCAI UNICORN Medical AI Challenge - UW KurtLab

March 2025 - September 2025

- Fine-tuned open-source healthcare models (AlphaMed, UltraMed, MedIron) and general-purpose transformers (LLaMA, RoBERTa) via Hugging Face APIs, applying cross-modal learning with efficient transformer backbones under compute limits for pathology and radiology tasks.

Underwater Acoustic Monitoring for Marine Conservation (Orcasound Project)

February 2025 - June 2025

- Developed scalable pipelines** to process 3,000+ daily hydrophone recordings and deployed real-time orca monitoring dashboards, accelerating noise trend analysis by **5x** and expanding data access by **300%** for 10+ research projects.
